

8th Expert Panel on the Global Startup Campus Initiative

Pranay Shah, Product Manager
Advanced Research + Invention Agency (ARIA)

27th May 2025

1 Introduction to ARIA

Advanced
Research
+ Invention
Agency

ARIA

Why do we exist?

From climate change to AI and bioengineering, society faces enormous challenges and opportunities that can be uniquely addressed by science and technology.

Different ways of funding science and technology can lead to breakthroughs. To get to different outcomes we have to create a different approach.

Unlocking scientific and technological breakthroughs that benefit everyone

Established in January 2023 by the UK government with high levels of freedom and autonomy, ARIA is a new kind of R&D funding agency empowered to pursue bold ideas.

We fund teams of scientists and engineers to pursue research at the edge of what is technologically or scientifically possible.

£800m

Initial budget

We're an independent public body with funding set for our first five years. We activate the R&D ecosystem to act as a force multiplier, building new communities of practice and translating breakthroughs to real-world impact.

8

Founding Programme Directors

Our first cohort of PDs — the scientists shaping and managing the R&D we fund — bring a range of industry and academic experience. They have joined ARIA from across the UK — from Newcastle and Cambridge to Glasgow — and from the US.

~60

Lean operational team

We support our PDs with a team to achieve their best work, staying small to preserve high trust and move faster. Our team comes from of disciplines and sectors, including start-ups, non-profits, and the public sector.

Executive Team

Ilan Gur

Chief Executive Officer

Founded [Activate.org](https://activate.org) to empower scientists & engineers to bring R&D to market. Previously founded 2 deeptech start-ups and was a founding ARPA-E Programme Director.

Pippy James

Chief Product Officer

Founder and CEO of a women's health start-up and Global Product Manager at Entrepreneur First.

Antonia Jenkinson

Chief Finance and Operations Officer

CFO of the UK Atomic Energy Authority. Prior to this, she was CFO/COO at the Satellite Applications Catapult.

Dan Cole

Chief of Staff

COO at healthtech startup Accurx, which supported the care of over 50 million NHS patients. Prior to this, Dan worked in strategy consulting focusing on sustainability.

Board of Directors

Matt Clifford

Chair
Co-Founder,
Entrepreneur First

Kate Bingham

Venture Capitalist +
former Chair of the
Vaccines Taskforce

Sarah Hunter

Technology and
public policy adviser

Angela McLean

Government Chief
Scientific Advisor

Stephen Cohen

UK Civil Service +
Gambling Commission
Commissioner

Advisors

Demis Hassabis

Founder and
CEO, DeepMind

Özlem Türeci

Co-founder and
Chief Medical
Officer, BioNTech

Katie Rae

CEO and
Managing Partner,
The Engine

Artur Ekert

Professional Fellow,
Quantum Physics
and Cryptography,
University of Oxford

Patrick Collison

Co-founder
and CEO,
Stripe

Hayaatun Sillem

CEO, Royal
Academy of
Engineering

Arun Majumdar

Founding Director,
ARPA-E; Dean,
Stanford Doerr School
of Sustainability

2 How we work

Advanced
Research
+ Invention
Agency

ARIA

Three core tenets of a new kind of R&D agency

Bold + long-term

We pursue R&D in under-explored areas that may seem far-fetched, but could unlock world-changing capabilities.

Multidisciplinary

We fund and manage projects across the full spectrum of R&D disciplines, approaches, and institutions to discover new pathways.

People, then projects

We empower our Programme Directors, and the research teams they support, with the resources and flexibility to dream big and experiment.

ARIA's theory of change

IMPACT

For a better world

A better future for the UK and the world

Our success is shaped by one question: when the children of the UK grow up, how will their lives have been transformed by ARIA's work?

Whether that's a life-changing technology or a burgeoning new industry, it should be obvious that ARIA played a catalytic role.

Over a decadal timescale, ARIA's investments will lead to significant returns by growing the economy, promoting scientific innovation and invention, and improving quality of life in the UK and beyond.

How it works in practice

ARIA PDs define an **opportunity space** — an area that we believe is likely to yield breakthroughs.

An ARIA opportunity space is:

- + Important if true
- + Under-explored relative to its potential impact
- + Ripe for new talent, perspectives, or resources to change what's possible

Each opportunity space is released publicly, and we invite feedback and input from the wider R&D community to help shape our thinking.

How it works in practice

Within an opportunity space, ARIA PDs develop and manage **programmes** that direct funding toward a focused objective.

An ARIA programme seeks to unlock transformative scientific or technical capabilities that:

- + Shift perceptions of what's possible or valuable
- + Drive significant social and economic impact
- + Are unlikely to be achieved without ARIA's intervention.

How it works in practice

Within a programme, ARIA PDs direct the review, selection, and funding of a coordinated set of **projects**, whose collective aim is to unlock breakthroughs that impact society.

Projects are led by Creators, research teams that ARIA funds and supports, sourced from all corners of the R&D ecosystem.

We welcome applications from individuals, universities, research institutions, small, medium and large companies, charities and public sector research organisations.

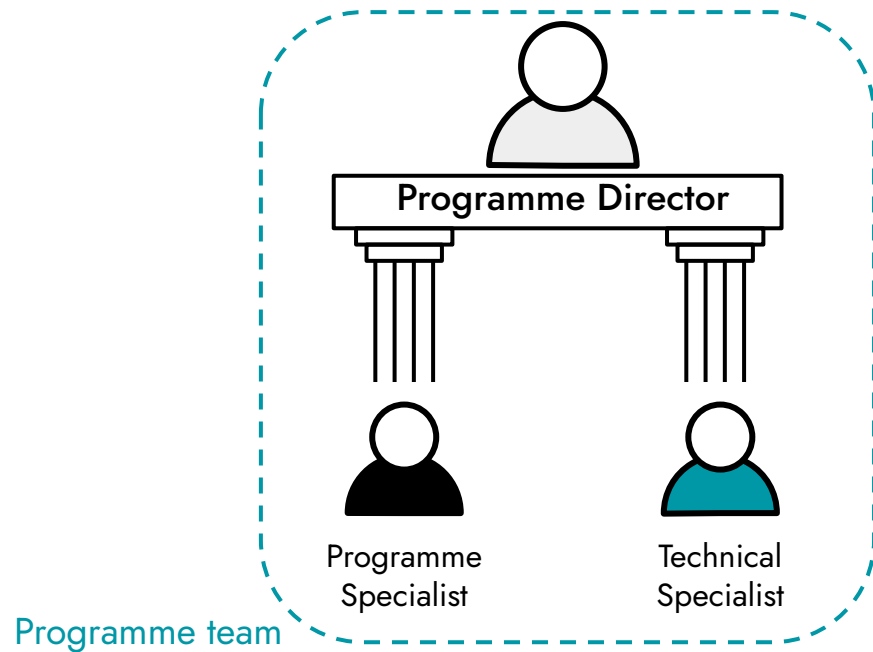

How it works in practice

Outside of a programme, PDs can support **opportunity seeds**.

These are small but ambitious projects aimed at uncovering new research pathways aligned with an opportunity space.

Programme Director:
Alex Obadia

Predicting Evolution

Programme Director:
Yannick Wurm

Sculpting Innate Immunity

Programme Director:
Brian Wang

Collective Intelligence Engine

Programme Director:
Nicole Wheeler

Proactive Biodefence

Programme Director:
Nicole Wheeler

Unlocking Superorganismal Secrets

Programme Director:
Yannick Wurm

4 How we fund

Who we fund

An R&D Creator (or Creator for short) are the individuals, teams who receive ARIA programme or opportunity seed funding.

Our Creators span startups, non-profit R&D organisations, multinational companies, academia, and more, bringing together the expertise, capital and networks required to pull new ideas into prototypes, and onward to real-world applications.

Our five principles of funding

**Our responsibility
starts with the UK
taxpayer**

**We're institution,
background and
location agnostic**

**We drive
transformational not
incremental change**

**We're globally
minded in our reach
and ambition**

**We always seek to
catalyse not
compete**

5 Taking idea to impact

Supporting value creation and the translation of breakthroughs

Entrepreneurial PDs

Our Programme Directors have experience in startups

Equity-free funding

ARIA's funding is equity-free, empowering scientists to translate their work into applications

Activation Partners

Working with world class organisations to take R&D into real world impact

Why?

By injecting more:

- + Entrepreneurial talent
- + Capital
- + Ideas
- + Organisations

into our opportunity spaces we can drive our research towards massive social and economic impact

Who?

- + 9 deeply technical and highly entrepreneurial organisations
- + Pioneers of new science innovation models, world-leading research labs, and deep-tech accelerators
- + United by a commitment to propel early-stage R&D to world-changing innovations

How?

They'll launch & deliver UK-wide initiatives over the next three years, including:

- + Developing hardware from scientific breakthroughs
- + Creating new research organisations for focused R&D

Prototype and develop products from inventions.

Translate neurotechnology research into applications.

Launch Venture Café gatherings in the UK.

CONVERGENT
RESEARCH

Identify and develop FRO-shaped opportunities.

Launch the 5050 programme in the UK.

Accelerate the impact of ARIA-backed research with AI.

Transform early-stage ideas into societal impact.

Place top AI researchers in leading UK science labs.

Expand the diversity of science translation mechanisms in the UK.

Summary

Freedom and flexibility

ARIA's freedoms are crucial in enabling us to pursue research at the edge of the impossible.

People, then projects

Empowering people, from our PDs to our Creators, increases our chances of success.

Idea to impact

Orienting our spaces and projects towards value propels us towards creating societal impact.
